My MISSION

My mission is to create funny and entertaining animations that may have people questioning my sanity... In a good way though. Not like, "this guy needs to go to a hospital, he needs help," but in a, "who comes up with these things?" type of way. I want to be that guy.

My whole life, I have found entertainment in making my classmates laugh at what I draw in class. I never wanted to go to college when I was in high school, because I didn't think there was anything worth going to school for, especially since my best talent was just making weird drawings. Then I took a 3D modelling and animation class my junior and senior years and that was the best class I had ever taken. I had always wanted to work in 3D, and just make animations in general. That was my first experience in modeling and animation.

I learned how to 3D model, animate and rig characters almost immediately, because I'm the type of person that learns how to do something really fast if it really interests me. I study it, keep at it, and learn. I think I might have a talent at doing almost anything art related, and that really helps in everything I do. I think if I was hired to do any job that is art related, even coding since I learned how to code html, css and javascript very quickly, I would excel at it.
